

# anti-GRAFFITI WEARLON®

PUT SCRAPING AND PAINTING TO AN END

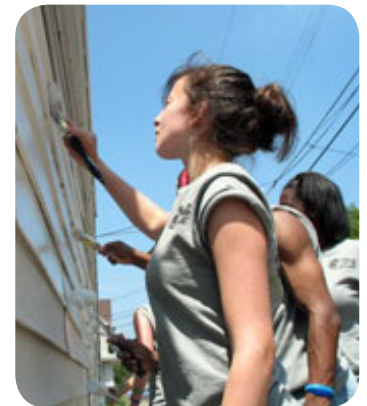

Our Wearlon® Anti-Graffiti Coatings protects surfaces from graffiti vandals.

An epoxy-silicone, three component, water-based, room temperature cure coating. The Wearlon coating with its slick surface resists spray paint, marker, pen, pencil, blood and most stain causing products thereby deterring the vandal.

Clean the Wearlon surface with soap and water or mild house hold detergent and a nylon brush, unlike other anti-graffiti coatings that require harsh toxic solvents.

- Non-Toxic
  - Low V.O.C.
  - Durable
  - Excellent Hiding Properties
  - Easily Applied via Spray or Roller
  - Easy to Clean without Harsh Solvents
  - Single Coat Application
  - Standard Color - Ivory
- Available in a variety of colors to match your application.
- Transparent, UV Resistant and Extremely Hard

STOP painting over  
and over again!

Most graffitied surfaces may be wiped clean with a damp sponge. For surfaces that have been spray painted or permanent marked, Wearlon suggests using a mild alkali detergent while scrubbing with a nylon bristle brush. Conventional household cleaners are also quite effective at removing stains.

For large areas, a power brush spray system with a diluted alcohol water solution or mild conventional paint thinners such as mineral spirits is recommended.
